

**NewswireToday - /newswire/ - Sunnyvale, CA, United States,  
08/15/2007 - A new collaborative online knowledge exchange  
platform for school and pre-college students.**

There is no dearth of Math and Science content on the web but most of it is either too rudimentary or too complicated to be of any real value to school kids. "While it is free for anybody to edit, the Editorial Board will ensure that the content and presentation is suited to the students of a particular age."

It is designed to be a collaborative platform where students, teachers, academicians and subject enthusiasts from all over the world, share and exchange knowledge and in turn develop a comprehensive body of knowledge catering to school children across the spectrum.

With companies spreading in the US and India, it strives to make quality learning accessible to all by combining its expertise in education and innovative approach with the latest in information technology. Due to the offshore model of operation, the company offers personalized teaching assistance at attractive rates thus opening the option of private tutoring to students who found it unaffordable so far.
